

The PIN CODER "Made in Germany" employs a system for encryption – similar to that of a combination lock.

The PINs are encrypted by moving the four number discs and made visible again by setting the MASTERCODE.

Start by selecting a four-digit PIN for access to the encryption system – this corresponds to a password.

Important: Please do not use a PIN that experts have categorised as "unsecure", nor one that figures among the "most common" PINs. For more information, refer to GOOGLE or WIKIPEDIA, etc.

Now, please turn the PIN CODER over.

NOTEBOOK

The VARIABLE MASTERCODE shown here is an additional encryption option.
The VARIABLE MASTERCODE **must be set prior to entering PINs.**

It increases the general security factor for a 4-digit PIN from 9,999 to 810,000 possibilities and protects against access to the system even when a thief does know your MASTERCODE.

Varying distribution of the 4-digit code across the three levels results in an additional 81 configuration variants:

i.e. in such a way,

so ...

or so:

The encryption system of the PIN CODER "Made in Germany" can in principle not be decoded. Therefore, be sure not to make any individual operation errors during the one-time basic configuration process, nor when utilising this "extremely convenient" system in day-to-day usage.

A few notes on security:

The PIN CODER "Made in Germany" should only be used for security codes/PINs.

Under no circumstances should individual security codes/PINs be revealed.

Also be sure not to store your PIN someplace where it will be accessible for unauthorised persons.

Use the VARIABLE MASTERCODE. A variation on one single number may be sufficient.

Avoid direct repetitions of the same number when "filling out the ovals with X numbers" (i.e. don't use the same number in pair).

Please observe the general security-informations: beware from "spying out of data" when entering your PIN at the pin pad.

The VIDEO-Function and its use for handling the PIN CODER "Made in Germany"
are subject to the copyright and intellectual property right.
Its use is exclusively permitted for the personal, private handling
of the PIN CODER "Made in Germany", however not for commercial purposes.
